[ASTRO 010 - Introduction to Astronomy 3.00 Units](#)

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 3

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This is an introductory science course for non-science majors covering topics of modern Astronomy. It highlights pivotal aspects in the history of Astronomy such as its distinction and further separation from Astrology. It lists the physical processes governing the origins of a star system and indicates the causes of the apparent motion of sky objects and cyclic sky events. The sources of periodical astronomical events such as phases of the moon, solar and lunar eclipses, meteor showers, and seasons are identified and related via the fundamental laws of physics. The astronomical tools of photometry and spectroscopy are introduced for their indispensable role in analysis towards the detection of planets around other stars, the investigation of dark matter and dark energy, and the ongoing search for extraterrestrial life. Additional topics include the origins of galaxies, large scale structure, and a full description of the Big Bang theory.

This is an introductory laboratory course in Astronomy designed for non-science majors. It incorporates substantial number of contact hours at the Montgomery Hill Observatory, making use of the state of the art telescopes, CCD cameras, and various adapters for cell phones. Students will identify constellations and asterisms, measure the apparent motion of planets and stars, and investigate the geology of terrestrial objects throughout the solar system. A series of lab exercises will demonstrate main behaviors of light and its interaction with matter. This course will cover the different stages of stellar evolution, making use of computer simulations to illustrate changes in size and energy output of stars, as they age. Course work will conclude with explorations on large scale structures such as galaxies, clusters of galaxies, and the expanding Universe.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 3

Prerequisite: AUTO 170 with C or better

Transfer Status: None | **Degree Applicable:** AS

This is an advanced automotive electrical course stressing diagram-based diagnostic methods. Students will design and build functioning circuits and systems, as well as compute and measure all aspects of performance. Students will learn to diagnose and repair a wide variety of circuit, system, and component faults in general electrical, starting, charging, lighting, instrumentation, accessory, climate control, audio, navigation, and SRS systems. Analytical skills and use of specialized test equipment will be stressed to provide students with excellent and highly marketable diagnostic abilities.

This course introduces students and entry level automotive technicians to the automotive electrical system. The course covers DC electrical theory, magnetism, Ohm's law, series and parallel circuits, passive components, and system dynamics. Students learn to calculate and measure voltage, resistance and current in theoretical and live circuits, build and test working models of typical automotive electrical systems using table top components and industry specific simulators, and practice diagnosis and repair procedures on a variety of vehicles. Students will also develop an understanding of modern electrical test equipment, such as DMMs, GDMMs, and DSO's, and industry standard troubleshooting and repair procedures. This course will prepare students for the ASE A6, Automotive Electrical Systems, certification examination.

This course will examine a variety of alternative fuels and propulsion systems used in modern automotive vehicles. The advantages and limitations of alternative fuels used in internal combustion engines (ICE) will be discussed. The topics on alternative propulsion systems will include the basic theory of operation, construction, and safety. The unique dangers surrounding alternative fuel and propulsion vehicles will be explored and how to minimize the risks. This course will also cover what is needed to operate safely and effectively around these vehicles.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 2

Transfer Status: CSU | **Degree Applicable:** AA/AS

Students are introduced to the world of plants and their ecological importance to humans. Plants provide the oxygen we need to breathe and the food we need to eat. Students will learn about plant anatomy, flowers and fruits, genetic modification of plants, nutrition, agriculture, gardening, plants for material, medicinal plants, poisonous plants, algae, fungi and diseases. Discussions include the impact of plants on the development of civilizations, the need for conservation, and the role of plants in the total environment.

CHEM 012A - Organic Chemistry 5.00 Units

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 0

Prerequisite: CHEM 001B with C or better

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

The first course of a two-semester sequence in organic chemistry with emphasis on structure, reaction mechanisms, and their kinetics. Topics include nomenclature, stereochemistry, mechanisms, reactions, and spectroscopic studies of organic compounds. Problem-solving techniques will be used to elucidate mechanistic, structural, and stereochemical features of reactions and molecules. Lecture and laboratory will cover synthesis, isolation, purification, elucidation, and identification of organic structures, instrumental methods and data interpretation.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 0

Prerequisite: CHEM 012A with C or better

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This is the second course of a two-semester sequence in organic chemistry designed to follow Chemistry 012A. Topics include nomenclature, stereochemistry, mechanisms, reactions, and spectroscopic studies of aliphatic and aromatic alcohols, aldehydes, ketones, acids, and other classes of organic and biological compounds (such as amino acids, proteins, and nucleic acids). Problem-solving techniques will be used to elucidate mechanistic, structural, and stereochemical features in chemical reactions. Lectures and laboratory methods will focus on synthesis, isolation, purification, elucidation, and identification of organic structures as well as instrumental methods and data interpretation.

CHEM 015 - Fundamentals of Chemistry 4.00 Units

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 0

Prerequisite: MATH 013 with P grade or placement by multiple measures

Recommended: MATH 013 may be taken prior or concurrent with CHEM 015.

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This course covers the fundamentals of modern inorganic chemistry with emphasis on atomic structure, chemical bonding, chemical formulas, nomenclature, equations, stoichiometry, gas laws, solutions and related topics. It is intended primarily as a preparation for the Chemistry 001A and 001B sequence. The central nature of chemistry among other branches of science is stressed, and examples of the important role that chemistry plays in our lives are presented.

Transfer Status: CSU | **Degree Applicable:** AA/AS

This course is intended for students with some knowledge of programming. Students learn to use JavaScript language to dynamically modify nearly all aspects of a web page, including images, links, text, and styles. Students also use JavaScript to validate forms, create data that persists across pages, and handle user input, including mouse and keyboard events. The course also introduces the standard Document Object Model that is used to represent web pages, and is also used by other technologies such as XML. Students study debugging techniques and best practices for writing code.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 2

Recommended: Basic knowledge of computer usage and keyboarding skills

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This course is an introduction to basic computer programming concepts using both the procedural and an object-oriented paradigm. It is intended for non-computer science majors, and for students interested in COMSC 075 who would like a more gradual entry into computing fundamentals. Topics include hands-on practice with software engineering tools, simple programs, variables, control structures, functions, input/output, and introduction to abstraction. Specifications, adherence to style guidelines, and the importance of testing to ensure that programs are usable, robust, and modifiable, will be addressed throughout the course.

Recommended: A working knowledge of Precalculus Algebra, equivalent to that covered in MATH 021 or MATH 025. Previous knowledge of computer programming (such as that covered in COMSC 020) is highly recommended.

Transfer Status: CSU | **Degree Applicable:** AA/AS

This course introduces students to the field of Data Science through computational and inferential thinking. Given data arising from some real-world problem, students will learn the fundamental skills in computer programming and statistical inference needed to analyze that data so as to understand and solve that problem. The course also addresses social issues surrounding data analysis, such as privacy, security, and design.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 3

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This course provides an in-depth exploration of engineering disciplines, the diverse roles engineers play in various industries, and educational pathways. The course equips students with strategies to optimize their academic success, introduces problem-solving tools, and highlights the engineer's connection with society and ethical responsibilities. It also focuses on improving communication skills relevant to engineering professions. Additionally, the course offers a dynamic, hands-on exploration of engineering, emphasizing computer-aided problem-solving and design projects. It provides a holistic learning experience, encompassing both technical and non-technical skills, with a strong focus on teamwork and engineering problem analysis throughout the design process.

This course covers the principles of engineering drawings in visually communicating engineering designs and an introduction to computer-aided design (CAD). Topics include the development of visualization skills; orthographic projections; mechanical dimensioning and tolerancing practices; and the engineering design process. Assignments develop sketching and 2-D and 3-D CAD skills. The use of CAD software is an integral part of the course.

Students learn the fundamentals of computer assisted problem solving, as it applies to the solution of engineering problems. The four major themes of this course are algorithm development, efficient programming/modeling, PC device interfacing, and practical and user friendly pre/post processing techniques. The C++ programming language is used to obtain solutions to various engineering problems. Object oriented programming using subjects such as classes, pointers, inheritances, dynamic allocation of memory space, and standard template libraries are emphasized.

This introductory engineering mechanics course is essential for students majoring in mechanical engineering or civil engineering, as it lays the foundation for most upper-division coursework. The course covers fundamental concepts, including the properties of forces, moments, couples, as well as the analysis of two- and three-dimensional force systems on engineering structures in equilibrium. It explores topics such as truss and beam analysis, distributed forces, shear and bending moment diagrams, center of gravity, centroids, friction, and area and mass moments of inertia.

This course is fundamental for electrical engineering and computer engineering majors, as it lays the foundation for most upper-division coursework in these fields. It provides a comprehensive exploration of electrical circuits, emphasizing the application of circuit laws and network theorems through analytical techniques. The course encompasses the analysis of circuits containing various components, such as resistors, capacitors, inductors, and operational amplifiers, in both DC and AC scenarios. Topics covered include the natural and forced responses of RLC circuits, phasors, AC power calculations, power transfer, and energy concepts. Furthermore, students will gain exposure to the construction and measurement of electrical circuits, becoming proficient in using electrical testing and measurement instruments like multimeters, oscilloscopes, power supplies, and function generators. They will also learn to work with circuit simulation software and interpret both measured and simulated data based on circuit analysis principles, catering to DC, transient, and sinusoidal steady-state conditions. Practical aspects, including component value tolerance and non-ideal characteristics of laboratory instruments, will be addressed, along with the construction and measurement of basic operational amplifier circuits.

This course focuses on the Chicax and their relation to U.S. society. It will address some critical areas of the Chicax experience in terms of identity, economics, labor, immigration, stereotypes, religion, and police-Chicax conflict. In order to provide a real-world analysis of the contemporary role of the Chicax in society, this course will include a Service-Learning component with a focus on the Chicax community of San Jose. A central objective of the course is to base both skill development and content on issues that are of personal and academic interest to the student. The ultimate objective is to use this analysis to come up with strategies for addressing the needs of the Chicax and other communities with similar circumstances.

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This course provides students with a basic theoretical background to critically situate Vietnamese American lives within the contexts of racialization, white supremacy, and settler colonialism. It draws upon scholarly, literary, and artistic production across disciplines and by multiple agents, including Vietnamese Americans, to expose and interrogate the orchestration of war and militarism, coerced displacement, global capitalism, and racialization. It also explores questions of gender, sexuality, class, religion, generation, transnationalism, community-building, and social justice political activism that intersect with Vietnamese American lives and creative expression.

This course analyzes the heritage and development of California from its beginnings with emphasis on the geography, natural resources, economic, social, ethnic, multicultural, and political forces that shaped the modern state. The Golden State's phenomenal growth and multicultural changes are emphasized. We will examine the Native American, Spanish, Mexican, and American periods. We will investigate the complex and sometimes violent process of populating, repopulating, and settling this region through immigration on the western edge of the American frontier. We will explore the cultural construction of the "California Dream" and evaluate how different groups have responded to its promises of opportunity and social renewal. The often-ignored voices of women, minority ethnic, and gender groups are an integral part of the course's narrative. Lastly, we will examine the historical origins of important issues confronting California today. This course analyzes the heritage and development of California from its beginnings with emphasis on the geography, natural resources, economic, social, ethnic, multicultural, and political forces that shaped the modern state. The Golden State's phenomenal growth and multicultural changes are emphasized. We will examine the Native American, Spanish, Mexican, and American periods. We will investigate the complex and sometimes violent process of populating, repopulating, and settling this region through immigration on the western edge of the American frontier. We will explore the cultural construction of the "California Dream" and evaluate how different groups have responded to its promises of opportunity and social renewal. The often-ignored voices of women, minority ethnic, and gender groups are an integral part of the course's narrative. Lastly, we will examine the historical origins of important issues confronting California today.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 0

Prerequisite: LA 010 with C or better

Transfer Status: CSU | **Degree Applicable:** AA/AS

This course provides the student with a working knowledge of the essential techniques used to research legal issues. Students will learn to find, select, and begin utilizing appropriate sources of law in the library and in online databases such as Westlaw and Lexis. The course covers primary sources of law such as federal and state constitutions, statutes, cases, and regulations, as well as secondary sources that include legal dictionaries, encyclopedias, digests, summaries, and articles. Students will learn how to update statute and case law using tools such as KeyCite and Shepard's citation indices. The course will include basic legal analysis and writing assignments which draw upon research results.

This is the first course in the calculus-based physics sequence for students majoring in mathematics, physical sciences, engineering, and computer science. Specific topics include kinematics, Newton's laws of motion, work and energy, momentum, rotation, simple harmonic motion, universal gravitation, fluids, and mechanical waves. Practical applications of these subjects are discussed in class and incorporated into group projects developed along the term. A problem solving approach, using mathematical expressions and symbols, is routinely employed in lectures and homework to illustrate the laws of physics governing real world situations.

This course is an introduction to the main physical processes governing earth's geosphere, atmosphere, and hydrosphere, highlighting interactions of these systems with one another, and with the sun and other solar system bodies. Main topics include formation of the solar system, the theory of plate tectonics, and the interactions of plate tectonics constantly reshaping earth's landscape. It also covers basic physical and chemical processes governing the rock cycle, the types of ocean boundaries, and the evolution of Earth's atmosphere, with special emphasis on the effects caused by climate change on the weather system all over the planet. Field trips may be required.

This course is an introduction to developmental psychology. Human development is traced from conception through death and dying. The biological, cognitive, psychological, social and cultural factors affecting development and the integration and interactions of these factors throughout the lifespan of human beings will be studied. The dynamic interrelationship of these factors to the uniqueness of, and differences between, individuals will also be considered. Development tasks and potential developmental crises in the contemporary multicultural society are identified for each age group.

Grading: L | **Advisory Level** — **Read:** 3 | **Write:** 3 | **Math:** 0

Transfer Status: CSU/UC | **Degree Applicable:** AA/AS

This course introduces the scientific study of psychopathology and atypical behaviors from a variety of perspectives including biological, psychological and sociocultural approaches. The course surveys the multidimensional influences on the diagnosis, etiology, and treatment of abnormal patterns of behavior. Traditional psychological models, as well as current research evidence of the reciprocal relationship of biology and behavior, are used to study psychopathology. Clinical cases are used to examine life-span cultural influences on abnormal behavior.
